Thank you Jon

I will thus include your interest to participate in the rollout of the programme in the group proposal FIN-TECH in which B-Hive participates and which will be submitted in response to the EC H2020 CSA ICT-35-2018.

Best regards
Dave

Dear Dave,

Yes, you can include the Danish FSA as a regulator who would be interested.

As previously stated, we are naturally interested to participate in projects that aim to transfer knowledge between established academics centres, fintech knowledge hubs, and regulators.

Kind regards,

Jon Hasling Kyed

Chief Advisor

Fintech, Payment Services and Governance Division

Danish Financial Supervisory Authority

Dear Jon

Thank you for your message. Would you mind if we include the Danish FSA as a regulator who is interested in participating in the programme but without an individual letter of support at this stage?

If so, then I will suggest to my colleagues in the consortium submitting the proposal to the EC to add the Danish FSA and Denmark as a region to be added when we rollout the programme when selected. Otherwise the geographical scope of our rollout will be limited to the 25 regulators and regions from which we did receive letters of support.

Kind regards,
Dave

Dave Remue

Dear Dave,

I am sorry I haven't gotten back to you any earlier, but last week was Easter, which is a big holiday week here in Denmark.

As previously stated, we are naturally very interested to participate in projects that aim to transfer knowledge between established academics centres, fintech knowledge hubs, and regulators. We also support educational programs that can enhance the understanding and knowledge of the effects of the increased use of technology within the financial sector. However, the Danish FSA do usually not issue such letters of support for individual projects. I hope we at a later stage can be able to participate to achieve the objectives of the project and maybe join some of the programs, but at the current stage we will unfortunately not be able to issue a letter of support addressed to the Commission.

Kind regards,
Jon Hasling Kyed

Hello Jon

I hope the information below has given you a better understanding of our project and its benefits. Would you be able to confirm your interest to participate? Thank you.

Kind regards,
Dave

Hi Jon

Thank you for your interest.

Let me summarise the benefits you can get from joining the project

- a) Three series of lectures, each of 24 hours, organised by a group of fintech knowledge centres supported by more than 20 universities and fintechs, on how to build risk management models for the application of big data, AI and blockchain in finance; notably in peer to peer lending, robot advisory and cryptocurrencies. Including brainstorming sessions on assessing the impact of possible (new) regulation. Lectures can be held at your location, and with fintechs participating. All this absolutely free of any costs on your side.
- b) Eight workshops, one per quarter, where academics, regulators and fintech experts, from across Europe, and from other world regions meet. In each workshop we discuss the state of the art of risk management for fintechs and discuss new models and regulations. These workshops are being held in eight different European Universities, and we can invite one member from each regulator as well.
- c) 25 other European market regulators are in the project, plus Switzerland. From the Nordics we have received letters of interest from Sweden and Finland, and we are finalising with Norway so only you will be missing.

What to do? Please express your interest by returning the letter of interest, of which I have enclosed a proposed template earlier.

Do not hesitate to let me know if you have further comments or questions.

Best regards,
Dave
