Event: Dublin, Central Bank of Ireland 17-18 February

Parties participating, their roles and their responsibilities:

- University College Dublin (UCD)
- Central Bank of Ireland
- Several colleagues from other Irish Universities (no industry, due to harm length policy at the Central Bank)

The role of the participants:

- Senior analysts, Head and Deputy Head of the Risk Analysis Data Analytics and Reporting (RADAR) Division and several other ones in attendance.
- The Head and Deputy Head of the Risk Analysis Data Analytics and Reporting (RADAR) Division gave also a 1-hour talk.

How will they stay involved?

- Participants will stay involved through follow up communications and seminars, hosted by the Central Bank of Ireland or by UCD.
- We initiated discussions on the Deputy Head of RADAR taking the lead on the blockchain part of the project (we would then focus on DLT)

What is their feedback on the use cases presented?

- The possibility of exchanging experiences and understand each other's research agenda and opportunities for collaboration is very valuable

Are the selected use cases in the end the ones that meet the expectations and requirements at most?

- Use cases were chosen from among the available ones in consultation with the Central Bank hosts though there was probably more interest in some of the research paper we concurrently presented, possibly because they happened to be more aligned to what people in the RADAR division are currently doing
